

HDJ-CX**PROFESSIONAL ON-EAR DJ HEADPHONES**

Pioneer HDJ-CX is so lightweight you might forget you're wearing them. Specially designed for absolute comfort and tuned to deliver tight audio with a wide range for mixing and monitoring music in any environment, the new headphones also feature a high level of sound insulation and are built to last.

You can wear the HDJ-CX headphones for several hours and hardly feel their presence. This supreme level of comfort comes from the brand-new lightweight, ergonomic design. Every tiny detail has been considered, including the wiring in the cable which has been slimmed down to reduce weight, and even the positioning of the curl on the coiled cable which has been moved closer to the plug for greater balance. It's easy to find a perfect fit thanks to all this, plus a high level of flex in the sturdy, stainless steel headband and adjustable earcups.

Once you've got them on, you might be surprised by the range of sound produced by such a lightweight pair of headphones. Mids and highs are clear and precise while lows are fat and powerful thanks to the new PEEK-PU-PEEK composite film diaphragm¹. Bass reflex chambers in the housings improve the low frequency response even more and the sound insulators bring a higher level of audio insulation, so you'll hear every nuance of the music.
