

BP-1

BP-1 PORTABLE PIEZO PICKUP FOR BANJO

Our banjo pickup is encased in lightweight tonewood, with a sensor that installs easily on the side of the bridge.

Unlike other banjo pickups, this unique way of capturing sound delivers a natural tone from your banjo to your amp or mixing board. It offers less chance of feedback than a banjo microphone pickup, and no modification to the bridge or instrument is necessary.

Detachable and one of the most portable pickups for banjo, BP-1 conveniently accepts a standard 1/4" cable.
