# CUSTOM CAST SERIES PHOSPHOR BRONZE SNARE

Peace's new Batterie Custom Cast line is the result of cutting edge advances in drum manufacturing technology. The process by which these drums are made starts with a 12mm thick shell cast from solid aluminum or phosphor bronze. A computer controlled lathing system is then employed to insure that an even, flawless shell is produced. The end result is a seamless, 5mm thick shell made of high-grade precious metal. The Custom Cast Aluminum Snare's bright attack is perfect for high volume sensitivity, while the Phosphor Bronze model delivers a warm voicing previously found only in wood shell snares. Fitted standard with tube style lugs and die-cast hoops, Custom Cast snares produce a solid blend of thick shell volume and steel shell sensitivity perfect for any situation.
