

MET-TIT-1

METAL TONES PICKS - TITANIUM (PACK OF 1 PCS)

Titanium is extremely hard and extremely light weighting in at just 4560 Kg / Cubic meter (roughly half of that of our other metals) This mixture of hardness and lightness means you get a very fast moving, bright sounding guitar pick that will last for years. Ideally suited for thrash or very fast picking on electric guitar. Metal Tones are designed around our classic 351 shape. They are CNC milled from solid Billet and polished to precise tolerances. We have also added a small hole, as we knew some people might like to use them as pendants.
